## **IT Security Search**

Correlate disparate IT data into an interactive search engine

Keeping track of who has access to data, how they obtained it and how they are using that access can be difficult in a disparate IT environment. Seeing the unseeable can be a challenge for IT. With billions of events to collect and review from a variety of sources, it's difficult to find relevant data and make sense of it. And in the event of a security breach, either internal or external, the ability to locate where the breach originated and what was accessed can make a world of difference. Luckily, IT Security Search, a feature of several Quest® solutions, makes it easier than ever.

IT Security Search is an intelligent looking glass that uses simple, natural search language to help IT administrators and security teams perform fast security incident response and forensic analysis. It's a web-based interface that correlates disparate IT data from numerous systems and devices into a single console.

With a quick search, you'll be able to find out who did what, when and where, whether it's a change to critical Active Directory (AD) objects, elevated privileges granted to a user or group, or someone inappropriately accessing sensitive files or folder data. And additional rich visualizations and event timelines help to provide more valuable insights to management and stakeholders.

IT Security Search is a free solution available as part of several Quest solutions, including Enterprise Reporter, Change Auditor, InTrust, Recovery Manager for AD and Active Roles, that pulls data and feeds it into a single pane of glass. From here, you can easily review and act upon all of the various activities in your environment.

IT Security Search makes identifying security breaches, both internal and external, easier than ever.

IT Security Search uses simple, natural search language to help administrators and security teams quickly investigate insider attacks.

#### **BENEFITS:**

- Reduce the complexity of searching, analyzing and maintaining critical IT data scattered across information silos
- Speed security investigations and compliance audits with complete real-time visibility of your privileged users and server/file data in one searchable place
- Troubleshoot widespread issues should an outage or security breach occur.
- Restore corrupted or maliciously changed AD objects with ease and speed

#### SYSTEM REQUIREMENTS

#### COMPATIBILITY

The following versions of data-providing systems are supported in this version of IT Security Search:

#### InTrust 11.3, 11.2

Change Auditor 6.9.3, 6.9.2, 6.9.1, 6.9, 6.8, 6.7, 6.6, 6.5

Enterprise Reporter 2.6, 2.5.1, 2.5

Recovery Manager for Active Directory 8.8, 8.7.1, 8.7

Active Roles 7.1, 7.0

For a detailed and current list of system requirements, please visit <u>guest.com/</u> products/it-security-search.

Easily understand the who, what, where and how of user access.

#### STATE-BASED DATA

- Gain critical insights into user, computer and group information; direct and nested group memberships; organizational unit (OU) and file/folder permissions; ownership; and more with Enterprise Reporter. Empower IT teams to comprehensively understand their state of security.
- View virtual attributes, dynamic group members, temporal group members and managed units from Active Roles.

#### **REAL-TIME SECURITY AUDITING**

- Search real-time information about changes to critical objects and sensitive data, whether on premises or in the cloud, with Change Auditor.
- Supplement native audit details with the actual user who initiated a change to AD, even if it was initiated through Active Roles.

#### **COLLECT AND ARCHIVE LOGS**

Gather native (Windows server, Unix/ Linux, workstation and more) logs as well as third-party logs from across your diverse enterprise network with InTrust<sup>®</sup> log management.

### COMPRESSED, INDEXED, ONLINE REPOSITORY

Conduct full-text search on long-term event log data and other server data for compliance and security purposes with InTrust, saving time spent looking for events.

#### **OBJECT RECOVERY**

Discover which AD objects have changed, including before and after values, and restore them in a few clicks with Recovery Manager for AD.

#### **ABOUT QUEST**

Quest helps our customers reduce tedious administration tasks so they can focus on the innovation necessary for their businesses to grow. Quest® solutions are scalable, affordable and simple to use, and they deliver unmatched efficiency and productivity. Combined with Quest's invitation to the global community to be a part of its innovation, as well as our firm commitment to ensuring customer satisfaction, Quest will continue to accelerate the delivery of the most comprehensive solutions for Azure cloud management, SaaS, security, workforce mobility and data-driven insight.
